

Environmental Policy

SRT-Microcéramique commits to lead their activities with respect for the environment. The goal is to look after the preservation of natural resources, to pollute as little as possible and to protect the health and well-being of our employees. We wish to engage in a responsible, sustainable way of conducting our activities.

This commitment will thus be followed through all sectors of our activity, from production and logistics to the administration, and will translate as follow:

- Compliance with REACH (Registration Evaluation and Authorization of Chemicals) regulation. The risks analysis is periodical and will lead to corrective measures and improvement.
- Compliance with ROHS (Restriction of Hazardous Substances) regulation.
- Waste reprocessing.
- Thorough examination of our suppliers' environmental policy.
- Awareness and reduction of our consumables whenever possible (Water, electricity, paper...)

You can contact us at any given time if you wish to learn more about our commitment and policies towards the environment.

Regards, Paul-Emile Faure, President.
