

RELIABILITY PRINCIPLES OVERVIEW

In order to garantee highly reliable product to his customers, SRT-Microcéramique follows a strict quality policiy.

- according to AECQ philosophy, each component belongs to a family, which most restrictives members (four corners) have been fully qualified.
- PME components are produced in our Vendôme facility, with very stable process and equipments, in order to insure reliability reproductibility.
- reliability is based on batch tests, new product or equipment specific qualifications and periodic requalifications
- in addition to those regular tests, our quality departement launch regular accelerated test to further deepens our reliability datas
- test and qualifications of our standard products are based on AECQ methodology and are qualified according to the following limits
- in accordance to AECQ methodology, specifics tests and limits can be specified to fit client need
- whole range of stricter reliability test can be propose for high reliability products (burn-in, shocks, pulses...) for medical, space, defense applications - based on our reliability database, FIT datas can be provided
